

Geography

At North Mundham Primary School

Our Vision for Geography at our school

At North Mundham we aim to inspire in pupils a curiosity and fascination about the world around us. Geography can inspire children to think about their own place in the world, their values, and their rights and responsibilities to other people and the environment. Our topics allow children to learn about different cultures and societies around the world and therefore broadening their understanding of what and who makes up the world around us.

Children in our school will learn about...

Children will be taught through three main ideas within Geography: human and physical geography, place knowledge and locational knowledge. These are introduced and repeated through geography rich based topics that are accessed through our Cornerstones curriculum.

All children will have the opportunity to...

Learn through engaging lessons which encourage them to be inquisitive about the world around them. They will be encouraged to use high quality resources that support children in their investigations and learning within geography. They will be supported in igniting an interest about the society we live in and other societies that exist across the world.

We enrich the curriculum by...

Building cultural capital of all individuals and giving children the opportunity to explore the local area as well as places further afield such as London. We have organized experiences for the children such as Chichester week which enable a lot of children to visit the local area of Chichester in a variety of different ways whilst learning of it's different human and physical features.

A North Mundham Leaver will...

- Know the geography of their local area compared to other differing local, regional, and global areas.
- Have developed a deeper understanding of the world around them.
- Have widened their vocabulary both in terms of geographical language but also descriptive language through their response to the world around them.
- Be able to use, read and interpret different types of maps.
- Be able to name and identify different places around their locality as well as countries and continents of the world.
